MF-110 Scale Inhibitor

WHAT IS MF-110?

Hardness causes scale crystals, deposits, equipment failure, and poor heat transfer in equipment. Elevated temperatures of water drives hardness out of solution as scale. Pressure washer equipment can fail to operate if scale deposits in the heating coils. Signs of poor operation are loss of pressure, poor heat transfer, poor rinsing, and coil rupture.

MF-110 SCALE INHIBITOR is a multiple component product to alleviate water problems associated with hardness!

BENEFITS:

Calcium is the earth's most prominent water soluble element. Calcium bearing rock such as limestone is the principle source for this water contaminant called water hardness. Limestone, (CaCO₃), originated from the deposition of calcium bearing shellfish and aquatic organism skeletons during prehistoric times. Water hardness is measure as parts per million (ppm) or grains of hardness. Each grain of hardness is equal to 64 ppm.

Hardness causes scale crystals, deposits, equipment failure, and poor heat transfer in equipment. Elevated temperatures of water drives hardness out of solution as scale. Pressure washer equipment can fail to operate if scale deposits in the heating coils. Signs of poor operation are loss of pressure, poor heat transfer, poor rinsing, and coil rupture.

DIRECTIONS FOR USE:

Directions: Use 1 ounce of MF-110 SCALE INHIBITOR for each 1 grain of water hardness (64 ppm) per 1,000 gallons of water in the rinse cycles of the pressure washing process. Continuous use in the rinse cycle will provide the prevention of scale and may also correct buildup.

Use on a regular basis for prevention purposes. Will allow machine to run as designed.

APPLICATIONS:

- Mobile Pressure Wash
- Mobile Washing Equipment
- Pressure Washing Equipment

Product Reorder No:

6540 -5	5 Gallon Pail
6540-4	4 Gallon Case
6540-QT	32OZ Case

TECHNICAL DATA:

Color.....	Clear
Odor.....	Faint
pH.....	9-10
Form.....	Liquid
Flash Point.....	212°F
Foam.....	Low
Biodegradable.....	100%

"Phosphate Free"
